PROJECT ABSTRACT SUBMISSION

COURSE: ENGINEERING CAPSTONE PROJECT – 1(23IE4053R/23IE4053A) A.Y. 2026 - 2027

TITLE OF THE PROJECT		An Intelligent Software Engineering Assistant for Automated Project Planning and Documentation	
S. No.	University ID	Name	
1	2420030033	Thota Usha Sri Sai	
2	2420030322	P. Kavya Sai	
3	2420030371	Ramayanam Vaishnavi Sree Vardhini	
4	2420030510	KNC Sphoorthy	
Name of the Guide		Kalidindi Bhavya Varma	

Abstract

The proposed **AI-based Software Engineering Assistant** is designed to make software project planning and documentation faster and easier. The system allows users to enter a project idea and uses Generative AI to automatically create important project documents such as Software Requirements Specifications (SRS), functional and non-functional requirements, user stories, product backlogs, sprint plans, use cases, database designs, API specifications, test cases, risk analysis, and project documentation. It can also assist in generating technical resources such as folder structures, README files, Docker configurations, and CI/CD workflows.

The system provides these outputs through a simple and user-friendly web interface, helping students and developers reduce the time and effort required for planning a software project. It combines artificial intelligence, modern web technologies, database management, Agile project planning, and software development practices into a single platform. The main goal is to help users transform a basic project idea into a clear, structured, and development-ready software project plan.
